

SPECIFICATIONS

- **2 semi-circular electrodes**
- **Connection:** 2mm female banana plug
- **Diameter:** 2.5 cm
- **Length:** 12.5 cm
- **Weight:** 38g
- **Nickel-free**

PRESENTATION

Its 2 semicircular electrodes enable global or selective stimulation and recording of the perineum (R or L).

This type of electrode avoids the need for anterior nociceptive stimulation, especially in cases of proven prolapse.

PRACTICAL BENEFITS OF THE PROBE

1 - Electrical stimulation - SEF

- Classic or R & L global stimulation of the levator muscles

2 - Biofeedback - BFB/EMG

- Classic or R & L global recording of the levator muscles

THERAPEUTIC APPLICATIONS OF THE PROBE

1 - Electrical stimulation - SEF

- Muscular insufficiency
- Phasic and/or tonic muscle strengthening
- Sphincter deficiency

- Inhibition of overactive bladder
- Global awareness

2 - Biofeedback - BFB/EMG: lying or standing

- Recording of global electrical muscle activity in supine position
- Progress monitoring of overall perineal EMG activity or R & L
